Establishing mother-baby care points: A strategy to increase retention of HIV-infected pregnant and lactating mothers and their infants in care

Resource type:

Success Stories

Publication date:

October 2014

Published by:

USAID/SUSTAIN

Sequence number:

31

Prevention of mother-to-child transmission of HIV (PMTCT) consists of more than simply giving anti-retroviral therapy (ART) to an HIV-positive mother. It calls for an appropriate treatment and care plan to ensure adherence on medication for mothers living with HIV.
